Description: The Ruasonid Explorer is a vessel dating from the time of the Old Republic, and although commonly used to explore new systems and map out hyperspace routes in this exciting time of expansion, it also served as a military scout vessel, a courier vessel and a light transport. Very fast for its time, it has an excellent hyperdrive for a ship of this age as well, although when compared to newer ships it is under armed, and poorly shielded, it is still an excellent vessel especially because of the streamlined and beautifully crafted exterior and interior design which makes this vessel highly desired by those who crave style above pure power and combat ability.
