Description: This fighter is a cross between the Tie E-3 experimental fighter prototype, and the now standard Tie Interceptor-S. The Interceptor-S has had a pair of fire-linked concussion missile launchers attached to the outside of its wings and heavier armour plating on its hull. Although this makes the fighter slower and slightly less maneuverable, the extra punch of these weapons and extra damage the fighter can take is considered to be worth this loss. The Tie Heavy Interceptor along with the Scimitar Assault Bomber is replacing the now outdated and vulnerable Tie Bomber with each of the new fighters being far better in their own specialised domains.
