* The X2 can fly in two configurations, with the s-foils open or closed, with them closed the ship can fly faster, but is less maneuverable and has less of a field of fire for the laser cannons so fire control suffers. For the foils open use the first figure for Laser Cannon Fire Control, Space Speed, and Maneuverability.

Description: When the Mandalorians confirmed themselves to their Alliance with the New Republic they were not agreeable to a total handover of their advanced technology. The X2 was their half way measure, with the Juannar tech's let free to improve the reliable and effective X Wing fighter. The X2 has many improved systems and is slightly shorter than the X Wing with heavily modified engines capable of outrunning an A Wing fighter. Although untested in battle the X2 looks likely to be as successful as its predecessor.
