Falcon Combat Airspeeder

The AS-16 Falcon combat airspeeder is the standard air support platform in the Palvar Defense Force. All Falcons are usually attached to a ground base in squadron strength of a pre-fabricated garrison in flight strength.

The AS-16 Falcon is a sleek and stream-lined with swept back wings and maneuvering fins for maximum speed and maneuverability. Its standard ordnance consists of a 20mm gatling projectile cannon (usually Mestic's vulcan cannon) mounted just under the nose and a pair of blaster cannons that are mounted on the tips of each wing.

In standard operation the Falcon is deployed in at least pairs to provide air support for PDF ground troops, performing everything from critical precision strikes to strafing runs.
