

The Red Hand

The Red Hand was created after the defeat of the Dark Jedi known as Jerec. The Red Hand was patterned off Jerec's vessel, the Vengeance, but heavily modified. The Red Hand is slightly larger and is designed to carry large amounts of ground troops and starfighters. Unlike many of the Super Star Destroyer variants created by warlords, the Red Hand was never even considered with a super laser as the cost would be phenomenally more than the already incredible price of construction. However, despite the lack of a superlaser, the Red Hand packs an impressive arsenal greater than that of an ordinary Super Star Destroyer.

The inside of the vessel is filled with cargo areas, vehicle bays, troop living quarters, starship launch and maintenance bays, conference rooms, war rooms, briefing amphitheatres, and 16 different observation decks, including one for the command staff, set just above the bridge. Also, there are what appear to be meditation chambers at various locations on the ship. The commander's office is an exact duplicate of the bridge, all the displays show exactly what their counterparts on the real bridge are showing, all the 'viewports' show exactly what would be seen from the bridge viewports. This allows the commander to monitor the crew's activities and see what they see without coming to the bridge everytime.

The Red Hand's design files and records of materials being bought and shipped to an unknown location for its construction were found in computer banks at an abandoned base. However, it is unknown who had it built and if it was ever finished. Nobody has ever seen The Red Hand nor heard of a ship matching its description.
