

Name: Phlac-Arphocc Automata Industries W-series droideka

Manufacturer: Phlac-Arphocc Automata Industries

Class: Battle droid

Height: 1.83 meters

Sensor color: Red

Dexterity: 2D

Blaster 7D, Dodge 5D

Knowledge: 1D

Mechanical: 1D

Perception: 1D

Strength: 3D

Technical: 1D

Equipped with:

Two twin built-in blaster cannons (Range 5-50/120/300, Damage 6D+2)

Two visual and two auditory sensors - Infra Red Vision

Shield Generator (+2D, due to power drain can only be used for 3 rounds)

Armoured Skin (+2D)

Rolling Motive System (Move 15, requires shield to be deactivated)

Move: 7

Description: The W-series droideka was a model of droideka, and the successor of the P-series droideka. The droid's blaster arms were enlarged and a higher-yield blaster was used, which meant that they required more energy to operate. Due to this, the W-series rarely used their shield generators, which could be very energy-consuming. This was also their weakness: they were vulnerable to blasterfire like any other battle droid without their shields. Despite this setback, however, the W-series was nonetheless an efficient unit on the battlefield with their enlarged, rapid-fire blasters. They were most notably deployed at the Battle of Geonosis. They were succeeded later on in the Clone Wars by the Q-series droideka.
