

Starships D6 / Umgah Star Destroyer

Umgah Star Destroyer

The Druuge-class Star Destroyer is basically a cheap rip off of the famed Imperial-class Star Destroyer with a few added perks. The Druuge-class ships are smaller, faster, more maneuverable, and pack more of a punch than the larger Imperial-class ships. Umgah technicians decided to implement a new piece of ordnance into the design of the Druuge, this being the partial acceleration cannon (PAC). The actual design concept was first conceived several years before the designing of the Druuge. With a practical version of the weapon now complete, most new design Umgah warships will be boasting at least one of them in their arsenal. As PAC technology becomes more fine tuned, they will most likely take the place of turbolasers on all Umgah warships. The ship itself resembles its Imperial counterpart but with a slightly roundish and blimp-shaped hull with the main command superstructure jutting from the dorsal posterior section. The fighter bay is housed near the nose of the ship and the shuttle/maintenance/supply bay is located on the dorsal side of the ship, directly in front of the command superstructure. The fighter bay was designed to "drop" the starfighters out of the hangar and into open space, thus increasing the launch time by a few seconds.
