Description: Much like the Empire that defeated it, the Trade Federation produced a huge variety of different combat vehicles as it attempted to find the most economic and deadly, it also seemed to relish giving these vehicles ridiculous acronyms another thing in common with the Empire. The AAS is one of the many air speeder variants that the Trade Federation used for air control before settling on their STAP's and Droid Starfighters. This design's slow speed, low altitude range and weak weapons led to it being rapidly dropped in favour of other designs, however a few remained in storage, and have made it onto the free market since the Trade Federation's destruction at the end of the Clone Wars. The remaining AAS's can only fetch a low price, and remain unpopular with any but the most desperate.
