Description: The MC-30 is actually a later design than the MC-80's which were involved with the Battle of Endor, however they again were converted passenger ships refitted into ships of war. The MC-30 was somewhat smaller than the MC-80, but had only a slightly smaller amount of weapons, but was fitted with anti-starfighter batteries, allowing it defend itself instead of being reliant on its starfighter squadrons as its bigger brothers were. Which is perhaps just as well, since the MC-30 could only carry a meagre 18 starfighters in its single hangar. The MC-30 in use operated somewhere between a frigate and a cruiser, filling a similar role to that which the Nebulon-B frigate performed for the Empire, but being larger and more heavily armed it was also capable of standing up for itself in combat against other capital ships. The other advantage that the MC-30 had was its powerful sensor package, which although weaker than the military grade electronics built into Imperial vessels like the Star Destroyers, was still significantly better than other capital ships that the Rebel Alliance had available.
