

## Vangrit

The Vangrit are a desert dwelling race of insectoids, who are traders by nature. Their species developed on their harsh and dry homeworld where water was extremely rare, and became the ultimate wealth for the species which developed there. The Vangrit used their intelligence to rise to the top of the food chain, and as their culture developed they became vegetarian by choice, and they began to settle in cities instead of their previous nomadic lifestyle.

They began space flight within the last few centuries and were conducted into the galactic community soon after, making use of their natural talents to join the mainstream of galactic society. They had little of interest to the Empire, but Vangrit ended up on both sides of the civil war making deals and making profit for themselves and their chosen side of the war.
