

Republic Armored Assault Walker

Instead of redesigning the old Imperial AT-AT for the New Republic, Kuat Drive Yards opted to go ahead and use a new walker design that they had originally created around the time of the downfall of the Empire.

The design, the I-AAW (Imperial Armored Assault Walker) is somewhat larger than the AT-AT, offers greater firepower and stronger armor, but the same troop carrying capacity of the AT-AT. The I-AAW was renamed the R-AAW for obvious reasons.

The main weapons on the R-AAW are the same as that on the AT-AT, a pair of fire-linked heavy laser cannons and a pair of fire-linked medium blaster cannons. However, the R-AAW's arsenal is augmented with a pair of repeating blasters which are able to lay down antipersonnel fire along the right and left fire arcs.

R-AAWs are giant four legged Imperial assault vehicles. They are virtually impervious to all but heavy artillery weapons. They form the core of only a handful of Republic heavy ground assaults (due to their cost, they are rare), and are often the first vehicles to leave their transport shuttle barges or drop ships and enter a combat zone. R-AAW walkers are used to crush and demoralize enemy forces. They also act as transports for Republic ground troops and light vehicles.
