Description: The DX9 transport was designed for the Imperial Stormtroopers by Sienar, to act as a deep space transport craft with boarding capabilities. The Twin Missile launchers give it the ability to damage and cripple space transports, and the ships 25 troop carrying ability are more than enough to overwhelm

smaller vessels, whereas several DX9's working in conjunction can capture small capital ships. The DX9 was however limited in its range, and could not handle large amounts of damage, meaning that this vessel in comparison to Lambda and Sentinel class shuttles was only produced in small numbers.
