Description: Although the AT-ST was the most famous of the Imperial Light and Medium walkers and was produced in by far the largest numbers, the Empire fielded a number of different designs and variations. The AT-HT is a heavy twin legged walker used for combat and patrols, where the firepower and armoured capabilities of a heavy walker like the AT-AT were required, but the transport capabilities were

not needed. Carrying enough firepower to deal with most other walkers, and a light cannon for defence against air speeders and lighter more agile vehicles, the AT-HT is a capable and powerful combat vehicle. It was only due to the Empire's large purchases and use of AT-AT Walkers that the AT-HT did not become more common, although the Empire did built and deploy massive numbers mainly to important installations where the walkers sheer power was felt to be needed.
