

Adventures / The Abandoned Asteroid

The Abandoned Asteroid

Author: Joe Clements

Homepage: <http://www.angelfire.com/ks/jclementsswrpg/index.html>

System: Star Wars

Category: Science Fiction

Requirements:

The players come out of hyperspace, and find themselves way too close to an Imperial picket. Assuming that the players are Rebels returning to a checkpoint, the Star Destroyer launches TIE fighters at our heroes. The TIEs swarm the players, and their only hope to survive lies in the asteroid field behind them.

Episode 1

The players come out of hyperspace, and find themselves way too close to an Imperial picket. Assuming that the players are Rebels returning to a checkpoint, the Star Destroyer launches TIE fighters at our heroes. The TIEs swarm the players, and their only hope to survive lies in the asteroid field behind them.

The asteroid field is very dense and difficult to navigate (Difficult to Very Difficult terrain.) Through spinning, rolling, diving, lurching, mind-bending turns, twists, loops, a canyon chase, a suicide dive through one of the really big asteroids, and whatever TIEs the gunners can pick off, the playing field should be narrowed to one or two really good pilots. Suddenly, these two (or one) are vaporized by a brilliant green blast.

An Easy Perception or sensors check shows that the blast came from one of the big asteroids around the ship. Now, the turbolaser targets the players ship and opens fire! (starship gunnery 4D, damage 5D, starfighter-scale)

They may wish to destroy the gun-emplacement (body: 4D, starfighter), or simply evade fire long enough to get away. Alternately, they may wish to land on the asteroid, or perhaps try to destroy the asteroid itself (not likely, body: 7D capital-scale). At any rate, once this encounter is over, the players have two options: investigate or leave.

Investigate:

If the players want to know what's going on, have them make sensors rolls, and have them describe what they're scanning for. If they scan a battle-damaged portion of the asteroid, they can notice some odd power emissions coming from within. If they think to scan the composition of the asteroid, they'll find that it's made of tharium and duranium composites, and the scanners won't penetrate it. Not interesting in and of itself, except that the rest of the asteroids in the field are regular old rock. Hmmmm...

Cruising around the asteroid will reveal an immense space door on the far side. It is hidden down in a folded-over crevice, making it difficult to detect until they're right on top of it. The crevice is wide enough to admit light freighters and starfighters, but not bigger ships like bulk freighters or capital ships. A passive sensor sweep reveals nothing, but a focused scan on the doors will lock a tractor beam on the ship (7D) and drag it inside.

If the players landed on the rock, they stumble upon a person-sized maintenance hatch in a similar hidden crevice. Dentonite will blow it (hatch is walker-scale 3D, but watch out for the explosive decompression when the integrity is compromised!), or a Moderate computer programming/repair roll will pop it. The tunnel, and all of its dank, dark, and spookiness, lead to the same place as do the space doors.

Leave

If the players decide that this place is bad news, and don't want to have anymore dealings with mysterious turbolasers in asteroid fields, have their proximity sensors warn them of approaching TIE patrols sweeping the asteroid field for them. If this isn't enough to coax them into the big, scary rock, just have Fiver lock the tractorbeam on them and drag them in. Maybe he thought they were a long lost Rebel convoy or something (don't forget, he's deranged). He'll figure out otherwise when they're inside, but hey, if they don't get in that asteroid, the adventure is pretty much screwed.

Episode 2:

The players are dragged into an immense cavern that is pitch-dark. Sensor scans show that the room is a vacuum, and that the gravity outside is barely enough to keep the ship on the ground. If they disembark, they will have to wear space suits and make climbing/jumping and swimming rolls to maneuver about. Since the room is dark, all darkness penalties apply, and since the only heat differentials are the other players and the ship, characters with this type of night-vision will only be able to detect these things. Sensor suites in different personal armors would be pretty handy right now, but the GM could always nullify those with some background ambient radiation or something. (Still, you'd never believe how many objects a character will smack into before it finally occurs to him/her to TURN ON A GLOWROD!!!)

Read aloud:

As you look around the area, you can tell that the room you are in is big. There are loosely defined shapes all around you, and your glowrods graze across big brown cloth tarps covering...something. You can't tell what. One of your lights catches a stack of crates in the corner. You notice that the walls, and for that matter, the floor and ceiling too, are all made of heavy-grade durasteel, like the kind found in hangars and spacedocks. The place looks old and deserted, and every surface you touch is layered in dust. Maybe the first order of business should be some light...

Now if you want to, you can modify the adventure script I used for your own characters. You certainly don't have to use one, but I've observed that in some situations, it really helps move the adventure along, and keeps the players from screwing around. I don't use them all the time (in fact, only use them sparingly, as they get to be cliché), but if you're going to use one, think about the way your characters (and their players) talk, think, and act, and don't write something out of character. Don't look at a script as forcing the hand of the characters; I see it as a colorful way of providing information without my players looking at me and asking: "What do I see?"

ASH: Kanowa, Scorp, either of you see a terminal or anything?

KANOWA: That's what I was looking for. This might be it over here...OW!(trips) Whoever they were, they left in a hurry.

SCORPION: Why makes you say that?

KANOWA: Didn't take time to put the tools away...(continues searching)

ASH: Scorp? You thinkin' what I'm thinkin'?

SCORPION: Yah. Somethin'...I can't put my finger on it.

ASH: Right. Just feels wrong...

SCORPION: Like death...

ASH: I've got a bad feeling about this.

On an Easy computer programming/repair roll, the players learn from the terminal they eventually find that the main power grid is offline, and rerouting power is possible. This requires an additional Moderate computer roll. Once power is restored, the terminal comes to life. From here, lights and gravity can be restored. Lights are Easy, but gravity is a Moderate roll...

KANOWA: I think I got it...right...

ASH & SCORPION (together): NO! WAIT--!

KANOWA: There!

Read aloud:

The lights come on, and suddenly the entire room is bathed in flickering white light. You are standing on the far wall of what appears to be some kind of hangar or launch bay. You see your ship sitting in the middle of the bay. To your right, the wall is full of spare parts, shelves, tools, and manuals. You see a plate of food, perfectly preserved by the vacuum of space. Whoever left did so in a hurry; they didn't even stop to finish lunch.

To your left, you see more clearly the large objects with brown cloth tarps obscuring them. You move to pull one off, revealing a Y-wing starfighter. Three more Y-wings are in line behind it, leading to the giant space door behind your ship. A circular door on the right wall says "REACTOR ROOM - AUTHORIZED PERSONNEL ONLY" across its front. Next to the terminal is a similar hatch, but it is unmarked.

When gravity is restored (and this is more fun to do if you do it while some characters are still floating around!), all players need to make Strength rolls to resist falling damage. Characters near the ground take 2D stun damage. Characters further up take 3D damage. Falling from ceiling level exacts 5D damage (offer to reduce the damage by -1D if the player can yell something really funny while falling!)

Life support can be restored, but the computer will require an access code first. This requires a Moderate encryption or Technical roll to bypass. Once this is done, the computer tells the player that atmosphere cannot be restored due to a problem in the reactor room. A door on the far side of the chamber is marked "REACTOR ROOM - AUTHORIZED PERSONNEL ONLY," and it is mag-locked, requiring a Moderate security roll to open. This is not the only problem: the massive door is also jammed with age. All characters may have to combine Strength or lifting rolls to open it, but a smart player might look for a lever, or get a power prybar to use for leverage. The door has a strength of 7D, and requires at least three

rounds to open fully, or two rounds to open wide enough for one person to squeeze through. All straining characters must make stamina rolls to keep up the exertion after two rounds. Failing the roll results in Strength and Dexterity rolls being reduced by -1D for the rest of the encounter.

The reactor room contains the reactor, and it is still hot and radioactive from being on standby for so many years (this is the source of the odd power emissions the players detected in the first episode.) On a Difficult Perception check, have the character notice an odd hatch in the ceiling (this is where the ASP will attack from.) Characters inside must make Moderate stamina rolls every five minutes (game time) to avoid passing out. Armored space suits add +1D to the wearers stamina, but other than that, they're on their own.

Reactivation of the reactor requires a Very Difficult Technical roll, but characters can combine on this one. The base difficulty is reduced to Difficult if the players thought to pull up a schematic of the reactor from the main computer.

Read aloud:

As the reactor thrums to life, the room begins to heat up. Power is returning to the core, and you can almost feel waves of radiation and heat through your suit. Suddenly, you hear a loud THUMP! You spin around, and the hatch you came in through slams shut. The hairs on the back of your neck stand on end, and instinctively you dive for cover as a blaster bolt whizzes just centimeters from your head and spangs off the wall. You peer out from behind the reactor, and you see a droid scanning the room for you! What now?

The character must roll his droid repair skill to know that the droid design is an ASP-7, a fifth-degree labor unit used for menial labor. This one, however, is armed with a blaster rifle and is trying to kill the character. Outside, the players may attempt to re-open the door and rescue the character trapped in the reactor chamber, but first they will have to deal three more Killer ASPs attacking them. The character in the chamber must make stamina rolls every other round for the first five combat rounds, and after that, he must make a new stamina roll every round while inside.

If any spacesuits are damaged (suits are compromised after being heavily damaged, or lightly damaged three times), the character will die from decompression in 1D rounds unless the situation is resolved (remember that atmosphere hasn't been restored yet!)

As for the character trapped in the chamber, he suffers under the aforementioned penalties, as well as failed stamina checks. After the third failed check, the character passes out into an incapacitated state and begins to die from radiation exposure (see below table):

Strength vs. Radiation

Character beats Radiation. Character is unconscious, but does not have to roll again for 5 rounds.

Radiation beats character by 1-5. Character is unconscious, and suffering from radiation poisoning. Until healed, all die codes are -1D.

Radiation beats character by 6-10. Character is unconscious, and suffering from radiation poisoning. Until healed, all die codes are -2D. It takes twice as long to heal as normal.

Radiation beats character by 11+. Character will not wake up without full medical treatment and bacta immersion. Without relatively immediate treatment, the character will die in 4D minutes.

The reactor is still powering up so the radiation it is putting out isn't nearly as lethal as it would be at full power. Roll the radiation damage at 5D.

Episode 3:

The players will have to act fast if they want to save their (probably) fallen comrade. The other door in the hangar is open now; that is how the ASPs got in. The door is open, and a spiraling-square staircase leads both up and down. There is nothing below, and the path is hopelessly blocked anyhow, so the only option is up.

Read aloud:

As you reach the top of the stairs, you see one main portal. Peering through the portal, you see a long hallway, at the end of which is door with red cross emblazoned on the front of it: it must be the medbay. You also see two other doors on either side of the hallway, one of which is marked "CREW QUARTERS," the other is marked "ARMORY." The door to the med bay is open, but the other doors appear to be closed and locked.

(For GM information, the armory is empty because Fiver looted it to arm the ASPs. You could skip to the CREW QUARTERS encounter if that's how the players want to proceed, but if one of them is badly injured, the best course of action is to go to the med bay.)

ENCOUNTER: THE MED BAY

The med bay is in pretty good condition considering the state of the rest of the station so far encountered, but within there are signs of a struggle; a med cart turned over, one of the bacta tanks is smashed, and so on. Emphasize the layer of dust on everything here: it really adds to the spookiness of the whole thing. Inside the bay, there are medpacs aplenty, a working bacta tank, and a 2-1B medical droid. The droid is somewhat dillapidated, and on an Easy droid repair roll, an examining character can see that the droids motivator has been ripped out. This is easy enough to install, but the trick is finding a spare part.

If the characters travel with a droid (or if one of them is a droid), the motivator from that droid could be temporarily transplanted into the 2-1B (although any self-respecting droid will be a little apprehensive, if not openly objectionable to loaning itself out as spare parts!) Conversely, a motivator could be scavenged from one of the fallen ASPs, assuming they weren't completely decimated (ideally, someone might have used a DEMP gun on one of them, but if not, surely ONE of them has an intact motivator.) If all else fails, let the characters find a droid repair kit or something while they're spellunking for a motivator. Be sure one of them thinks to stabilize the wounded character with a medpack before going on the search, or they may find him dead when they get back. Once the motivator is installed, read aloud:

"AAAAAAAAAAAAHHHHHHHHHHHHH!!!!!!!!!!" The droid screams and throws its arms over its head and cowers, as if terrified of an aggressor.

"GET AWAY FROM ME! IT IS NOT MY FAULT! PLEASE! DO NOT LET THEM DEACTIVATE ME! NOOOOOOOO-"

All the lights on the droid go out, and it falls silent.

The players will need to make another Easy droid repair roll to reactivate the droid.

The droid whirrs back to life, significantly calmer. "What-what-what has happened? Who are you? Where-where-where is master Tourin?"

The players (probably) have no answers to give 2-1B, but if they explain their situation, and the ailment of their friend, 2-1B's programming takes over, and he fills the bacta tank. "Place him in the tank, masters, and let the medicine work."

If the players ask 2-1B about their circumstances, read aloud:

"The last thing I remember are the master's ASPs coming in here and ripping out my motivator. Then, you showed up with your injured friend. Of course, all this has happened after everyone left."

This will probably pique the interest of the players, but 2-1B won't say anything else about it due to his absorption in his work. A Very Difficult persuasion roll would get him to tell the tale, but otherwise the players will have to find out what happened by going through the crew quarters. "Please, I really must turn my attentions to my patient..."

ENCOUNTER: THE CREW QUARTERS

Read aloud:

You see a large room, with double-bunks lining both walls. Many spacer's chests sit next to or on the bunks, some opened, but most still closed. You can tell that whoever left did so in a hurry.

There's nothing in the room, but the characters do see another door at the far end of the room.

This room is much nicer than the main hall. It has only two beds, and some tasteful decoration. One of the beds is rumpled, with various items scattered around it. The other has been made quite nicely, and shows no signs of untidiness.

The rumpled has a chest sitting on it, opened and rifled. There is a datapad sitting on the pillow, and it is on standby. The player will have to find a power source for it (a blaster powerpack or something) to get it up and running. This requires an Easy Technical roll if you want to bother. Once it is activated, read aloud:

The datapad flicks to life. You see a list of what appear to be journal entries. You scroll the list to the bottom and press "PLAYBACK." An image of a man appears, and he begins to speak.

"Well, so much for the dreams of a few disconcerted Imperial citizens, eh? Tip came in today that the Impies found our little hideout herein the Soonda-Hav Asteriod belt. Too bad, because we had a nice little supply cache going here. I'll have to remind myself to log these coordinates, so we get to these supplies again. If Senator Organa's and Mon Mothma's plans go forward, some Rebel Alliance base will need these supplies.

"We'll also need the Force." You see the man pause. He strokes his dark beard, and his light-blue eyes look thoughtful. In the background, you hear shouting and someone saying: "C'mon Tourin! Last transport is leaving now!"

"Guess I'll leave this here. Master Arkanian will probably be angry, but these things just aren't that safe to have on your body, what with Palpatine's New Order and all. Besides, I know that someday, I'll be back. I'll be stronger then, and it'll be waiting for me." You see him put something out of the field of the lens.

"Mendi is crazy. He's decided to stay here and keep watch for Impies and such, and to protect the supply cache. Fiver is staying to keep him company, and he's got plenty of food and supplies to last him. He's

also got enough ASP droids to care of maintenance. Still, the only human on a station full of droids in the middle of nowhere...gives me the creeps.

"Oh, well. That's the end of Alliance Supply Depot Soonda-Hav. Down with the Empire, death to Palpatine, long live the Alliance, and may the Force be with us!"

With that, the recording shuts off.

If the player makes a Moderate search roll on the chest, he discovers a false bottom. Inside is a working lightsaber.

ENCOUNTER: ASPs!

After this encounter, proceed directly to ASP attack. There are two ASPs per character, but no more than five. The characters may destroy them all, or they may leave one standing to interrogate it. If the characters make an Easy droid programming roll, they recall that ASP droids can only respond with "affirmative" and "negative," so all questions have to be in yes/no form (this is a really funny scene for players who have forgotten this little tidbit!) Any character who activates the lightsaber stops the ASPs dead in their tracks. See the side bar "Tourin's Lightsaber."

Tourin's Lightsaber

Jav Tourin was a minor Jedi who studied under master Darrin Arkanian (see GG9: Fragments from the Rim), a Sullustan Jedi Master. Tourin, along with Bukus Mendi, were in charge of the Soonda-Hav Rebel supply cache. This was early in the Rebellion, so the crew of the station relied heavily on droids for labor. Mainly, ASPs were used in conjunction with various power droids and whatnot. While Tourin and Mendi, were pretty close, Mendi's best friend was an R5 unit he called Fiver. Tourin was always a little suspicious of Mendi's sanity ("I mean, he hangs out with droids!"), and so he made sure that all the droids had a healthy respect for his lightsaber (Tourin always had some negative tendencies, and these eventually led him to be consumed by the dark side of the Force.) This tactic worked particularly well against the low-intelligence units (like the ASPs and power droids), but Fiver was unimpressed by the limited skills the novice Jedi possessed. However, the ASPs remember Tourin's energy blade, and they don't cross it unless whoever's controlling them makes a Very Difficult command roll.

Episode 4:

By now, the other player character should be healed enough to continue with the adventure. The other players should bring their comrade up to speed (as GM, you might have the injured character's player run to the local convenience store for munchies. This keeps the player from learning what has happened, keeps up the realism flow, and brings a fresh stock of Doritos and Dr. Pepper!)

Now 2-1B will be more open to questions since his patient is healed. 2-1B knows all of the history in the sidebar (he also believed Tourin to be insane), he knows who is at the controls of the station, he knows what happened to all the stations occupants, and once the characters tell him the date, he'll know how long the place has been dormant (this depends upon what time frame you're running the adventure in; it would work both in a Classic-era or New Republic-era campaign. For my characters (Syndicate: A.S.K.), it was the Classic-era, and the station had been dormant for about 10 years. In a NR-campaign, it could be as old as 40.) At any rate, be sure to have 2-1B give the characters a course of action (get to the

command center, shut down Fiver, yadda yadda) if they don't figure it out themselves.

(I wrote a script for this scene, but it was fairly lengthy, and I didn't want to type it all. If anyone wants to see it, I'll post it, someday, maybe.)

ENCOUNTER: MORE ASPS

Fiver has been listening (he has the entire compound wired) and has brought all of his defenses on line. First he throws another wave of ASPs at the characters. The ASPs pin them in the main corridor, and the two at the very end of the hall are crewing an E-WEB. There are 10 ASPs in all, and this group has been ordered by Fiver to ignore the lightsaber, so that trick won't work again. The ASPs fight until they can't. The ASPs are positioned so as to prevent access to the turbolift that leads to the control room. Once the ASPs are dealt with, the players can attempt to use the turbolift to reach Fiver. Fiver was prepared for this course of action, and stops the turbolift one floor beneath him.

Read aloud:

Suddenly, the lift shudders to a halt. The lights flicker and you hear a distant crashing. You can't tell if the sound came from above or below you, but you don't want to wait and find out.

As the last person steps out, read aloud:

As you step out, the lift lurches and the cables above it break. You better jump for it or you'll be sliced in two!

The character needs to make a Moderate jumping roll. Don't let the character die, but a good injury would sure make "choosing the lamb" for the enclosure grid easier.

OPTIONAL ENCOUNTER: ZERO-G MINE FIELD

If the players have been making it through pretty easily, you as the GM are feeling pissy, or you just have a burning desire to know how your players would handle this situation, alter the map of the compound so the characters must cross a dormant reactor to reach the room with the enclosure grid. This reactor was used to extract space gasses and minerals from the surrounding area as an auxiliary fuel source, so it is open to space. The players can cross the reactor using their swimming (half-move) or rocket pack operation skills. The terrain is Easy, but hitting a mine increases the difficulty to Moderate for the rest of the round. Failure means that the player has stumbled onto a concussion mine laid by the ASPs. The mines do 4D damage to anyone at Point Blank (stumbling) range, and other characters must make Moderate Dexterity checks to avoid being knocked out into space or into the path of another mine. The closer a player is to the bottom of the shaft, the more difficult it is to keep from being knocked out into space.

If you feel really mean, give a couple ASPs rocket packs; after all, THEY don't have to worry about ruptured suits...

ENCOUNTER: THE ENCLOSURE GRID

(Okay, I stole this idea straight out of Children of the Jedi by Barbara Hambly, but anyone paying attention should start to notice that with the exception of Callista, some Gamorreans, and of course Luke Skywalker, this IS Children of the Jedi, albeit a shortened version. I had just finished reading that

book when I wrote this, and I thought, "Wow! What a cool idea! An abandoned asteroid full of dangerous shit! I wonder how Syndicate: A.S.K. would handle this..." You're reading the end result of my musings.)

Once the characters have entered the room with the grid, either from the turbolift or from the zero-g mine field, read aloud:

As you step inside the room, you see that it is well lit...and occupied. A lone ASP turns from whatever it was doing and levels its blaster rifle at you!

The characters will undoubtedly shoot it. (Duh.) Read aloud:

The blaster bolts slam into the ASP's chest, and it back-peddles into what looks like a long, upward-sloping maintenance shaft. As you peer inside, you see that ASP struggling to stand, but then a blinding flash of light fills the corridor. You can make out several blue-white lightning bolts arcing through the corridor, and you can feel the electricity making the hair on your arms stand up. When the blast is over, and your eyes clear from the flash-blinding, there is nothing left of the ASP, and all you smell is something like burnt ozone.

The control room lies beyond the enclosure grid, but getting through it is no small feat. One character will have to divert power from the grid, requiring an opposed computer programming/repair roll against Fiver, who will actively try to shut them out of the system. The characters don't know why the controls are fighting them (for sure, but they could take a wild guess.)

A new check must be made every round a player wishes the grid to be offline. Needless to say, now is the time for Character and Force points.

The tunnel is very long, and it is Moderate terrain due to it being cluttered with wires, cables, conduits and components. A good sized human could still stand upright in it, though. At All-Out speed, it will take 4 rounds to cross. The player in the grid will be fine unless the player operating the grid fails a check. then the grid activates in the next round doing 10D damage to anything inside. The master control is on the other side, right next to the entrance. An Easy computer programming/repair roll, or a blaster shot, will shut down the grid from here. Fiver cannot override a master control command, as he never envisioned anyone making it this far into his sanctuary.

Assuming the characters survive the encounter, read aloud:

As your hand reaches for the controls to the grid, you hear a metallic click behind you. You turn your head to see an ASP droid with its blaster rifle leveled at you.

"Don't move, right?" you ask.

"Affirmative."

The player is still directly in front of the tunnel, so both he and the ASP are in the line of sight of the other characters. A skilled marksman could try to sniper the ASP, but failure might mean that other character was shot (Long Range, Very Difficult (30)). Another approach would be for the character at the end of the grid to somehow get the ASP into the grid. ASPs are stupid automatons, and a good persuasion or con roll could talk the ASP down the tube. For more finesse, the character could move fast and toss the ASP down the tube, but this would be Difficult brawling total, then a Moderate Dexterity total to keep from going down the tube with him.

Episode 5:

Now for the final showdown. Three battle-hardened bounty hunters against...an insane astromech droid.

Sound insane? Well, yeah, I agree, but I had the idea at 3:00 am, so I wrote it down before I could forget it.

Read aloud:

As the last man emerges from the tunnel, you scan the room. You see display monitors flashing, and switching images back and forth do different parts of the compound. You see the main hangar, with your ship sitting and waiting, you see the medbay with 2-1B fretting about, the corridor with mangled forms of Killer ASPs. You see the enclision grid, and a room with 3 humanoid forms in spacesuits, looking at monitors...

And another ASP is stalking up behind them!

As the players whirl around and bring tier weapons to bear, they see 10 ASPs flankiing another, modified ASP. This ASP has a faded brown leather jacket on, and is brandishing a blaster pistol instead of a rifle. Also, his face has some kind of DimSim plate affixed to it, and a human face is starring out.

Read aloud:

A voice seems to boom out from everywhere. "I, Mendi, master of darkness, have conquered death! I live on in this mechanical suit of armor! I am the greatest Jedi Master there has ever been! Ha, ha, haaaaaaah!"

As the characters prepare for the ensuing battle, ask for Perception checks. Keep asking for the checks throughout combat, untill one player has generated a Moderate (13) total. This total will let the character notice a chord leading back to a utility closet, and from under the door, two little, stubby legs are visible. The perceptive character could ask another character to create a distraction while he blasts at the closet, or they might come up with another plan (a Wizard of Oz type ending is not advisable, and actually is stupid.) When Fiver is deactivated (one way or another), the ASPs break off the attack and go into standby mode.

*Fiver's stats are stock (pg. 71 Cynabar's Fantastic Technology: Droids, with the addition of whatever Technical skills you as GM see fit (since he probably won't get to use them, just adjust his computer programming/repair to be close to that of the character operating the enclision grid. Just don't make him stronger than a blaster bolt.

**If the players are itchin' for another fight, you could send the Killer ASPs inot a frenzy when Fiver deactivates. You could also send them up against some other nasty traps on the way back to their ship. Or not. Hey you're the GM, and it's probably about 2:30am by now anyway. (I don't know how anyone can stretch an adventure over two nights. I try to do cliffhangers, but they piss me off as a GM just as much as the players get hacked, BECAUSE DAMMIT, I WANT TO KNOW WHAT'S GONNA HAPPEN, TOO!!)

***For an added challenge, you could have the station go onto self-destruct mode, and give the characters 10 minutes (real or game, your choice) to either escape or deactivate. This is especially usefull if you want to run the scenario, but don't want to give the players EVERYTHING IN THE COMPOUND. Or if you've got really smart players with really skilled players, this could test their mettle, since they'll have to find some way into that basement that was blocked on the staircase...

ADVENTURE REWARDS

Aside from all their eyes can behold, give each player 1-3 character points per episode, with usual bonuses for anything that struck you as cool.

Killer ASPs

Type: Modified ASP-7 Labor Droid

DEXTERITY 2D

Blaster 5D, dodge 5D, missile weapons 3D

KNOWLEDGE 1D

MECHANICAL 1D

PERCEPTION 1D

Search 4D, sneak 3D

STRENGTH 2D

Lifting 4D

TECHNICAL 1D

Droid repair: ASP-7 5D

Equipped With:

- Humanoid body (2 arms, 2 legs, head, torso)
- Ocular/audio sensor package (+1D search in quiet or dark conditions)
- Holo-recorder/transmitter
- Body armor (+2D physical and energy, torso and head only)
- Blaster rifle (5D, attached to right arm)
- Grenade launcher (4D/3D/2D, ammo 10, left shoulder, retractable)

Move: 8
