Description: The AP-300 is a large transport vessel with a heavy laser mounted on the front which it uses to shatter asteroids into fragments before bringing the pieces which contain valuable elements aboard using its tractor beam. It uses many of the same parts as the Gallofree Medium Transport which makes it relatively cheap for such a well equipped and large transport vessel. AP-300's are common vessels throughout the galaxy, normally only coming into dock to empty their holds and to refresh the crew, spending year long tours in deep space hunting down the elements which are needed to keep the wheels of galactic industry turning.
