Description: The Harkners-Balix 903 is a conventional light transport often used by corporations and the independent market, and is a common rival to the Corellian YT series of freighters. Many modified versions of this craft, are used by pirates and smugglers who take advantage of the larger than average cargo hold to add weapons faster drive systems and a variety of other improvements and modifications. The famous smuggler Talon Karrde uses the HB-903 "Etherway" to a great extent, a vessel heavily modified with smuggling compartments and the addition of six turbolasers which make it a powerful combat vessel and a big surprise for any customs vessel which attempts to board it.
