Damage (Rifle): 5D+2

Damage (Sniper): 7D

Damage (Grenade): 8D/5D/2D

Blast Radius: 0-3/6/10

Description: The DC-17m Blaster Rifle is the standard issue blaster for the Clone commandos. This weapon is a variant of the DC-15 blaster rifle, which is what standard Clone troopers use. The DC-17m is much smaller and lighter than the DC-15. It is an effective weapon that can be used with deadly force, and can be field-stripped, and outfitted with a modular sniper attachment or anti-armor attachment. The DC-17m's primary Blaster attachment has a magazine capacity of sixty rounds, with Clone Commandos carrying up to five magazines for a total of three hundred rounds. The Sniper attachment has magazines holding five high-powered rounds, with each Commando carrying up to four magazines for a total of twenty sniper shots, while the anti-armor attachment only chambers one shaped-charge anti-armor grenade at a time though a Commando may carry an additional three in reserve. The weapon has a readout that keeps track of and displays the total amount of compatible ammunition and ordnance currently being carried by the Clone Commando. Switching the barrel attachments requires one action.
