Description: The Zarun Assault Starfighter is an unusual design first introduced in the years after the Battle of Endor, and shares a number of features with the Tie Series of fighters. It is a fast starfighter with no hyperdrive system, which is powered in part by a set of solar panels, these panels however are controlled by a automated system so they are always positioned to take advantage of the available solar energy. The Zarun also uses these panels to radiate away heat from its weapon, a proton accelerator cannon, this weapon is basically an advanced version of a Laser Cannon, much larger, doing noticeably more damage and having a greater range. The Zarun has never sold in massive numbers due to the expense of the fighter compared to similar designs which use more recognisable and easily maintained

technology, but these fighters have proven themselves as a powerful and capable design and the advanced technology aboard looks certain to find its way into the next generation of Starfighters.
