Description: The ATSP is a scout walker with a number of additions to it, mainly the addition of a Tie Fighter sensor package. This allows this Scout Walker to be used as mobile sensor platform, helping to scan for starships landing in remote areas of planets, as well as to help in planetary based searches. The ATSP is also a sealed vehicle which has enough supplies to last its crew for 24 hours, and has the addition of an Infrared sensor package to the forward viewing ports. The forward viewing ports are also

enhanced NeuroSaav Sure-Sight systems, which give the occupants a +2D to Perception checks in low-visibility situations and a +2D to weapon attacks against targets that move more than 10 meters per round.
