Description: Dating back to the founding days of the Old Republic or perhaps even earlier, the Preor fighter was one of the first space combat vehicles ever built. The simplicity of the technology used, means that even the most poorly educated engineer can repair and maintain these vessels (+2D to Tech

when working on this class of vessel, due to its low technology), but this advantage is also its weakness, titanium armour, directed thrust engines and beam lasers make this vessel extremely poor these days, however in its day these were the combat vessels of choice. The Variant A of this design packs an extra power generator, and four Beam Lasers, making it one of the faster and more dangerous of the designs. These fighters are now only used by the truly desperate, who take advantage of a fighter with a price lower than some speeders or droids.
