Description: As the war against the New Republic continued, the Empire found itself getting forced into the far reaches of space, with transit routes between the remnants being blocked by New Republic forces. This meant that the Empire had to map new hyperspace routes, a job they used the old Mu class scouts for, but they weren't really suited. So once again the Empire approached Sienar Fleet Systems for a new vessel, what SFS did was reworked the Lone Scout design, upgrading it from civilian to military with more powerful weapons, sensors and engines. This suited the Empire perfectly, and they started to phase out the Mu class as soon as Tie Scouts became available.
