Creatures D6 / Barbed Hookfish (Carnivorous

Name: Barbed Hookfish
Classification: Fish
Skin color: Brown and tan (with blue-purple fins)
Distinctions: Defensive exoskeleton
Point of origin: Koboh
Habitat: Underground waters
Diet: Carnivore

Dexterity: 2D
Perception: 2D
Strength: 2D

Special Abilities

Hooked Fins: The Barbed Hookfish had hooked fins ideal for attacking other fish and even birds, causing Str+1D damage.

Defensive exoskeleton: The Barbed Hookfish developed a hard exoskeleton which gave it a +1D to resist damage.

Move: 10 (Swimming)

Description: The barbed hookfish was a species of fish endemic to the Outer Rim planet Koboh. The species evolved out of necessity into a brutal predator. Unlike other fish in its taxonomy who fed on krill and water-based nutrients, the barbed hookfish developed a hard exoskeleton and hooked fins ideal for attacking other fish and even birds.

Skoova Stev, a fisherman who resided on Koboh, caught a barbed hookfish in the smuggler's tunnels beneath Rambler's Reach Outpost in 9 BBY and put it in Pyloon's Saloon.
