Strength: 1D

Special Abilities

Carnivore: Laa are carnivores, but only dangerous to the Tiny yobshrimp which lived in the gills of tee scalefish, and they were then licked out and eaten by laa.

Move: 9 (Swimming)

Description: The Laa, also known as the Fantailed Laa fish, were a species of scalefish found on the planet Naboo and the moon Jedha. They lived alongside six other scalefish species in the waters around the city Otoh Gunga in Lake Paonga, and could also be found in the Abyss, where they were preyed upon indiscriminately by the large colo claw fish and opee sea killers that dwelt there. Tiny yobshrimp lived in the gills of tee scalefish, and they were then licked out and eaten by laa.

Biology and appearance

Laa had orange and peach colored skin with an elongated snout. They had two antennalike appendages located between their yellow eyes that streamed behind their body. The tails that were used for propulsion were curved.

History

Laa existed in the waters of the Mid Rim planet Naboo during the invasion of the planet by the Trade Federation. They were present in Lake Paonga as Jedi Master Qui-Gon Jinn, his Padawan Obi-Wan Kenobi, and the Gungan Jar Jar Binks swam down to the city of Otoh Gunga to speak with Gungan representatives.
