LTV-108 Assassin Droid

The LTV -series assassin droids was a money (almost as much as 3/4 of Overproject Death Star), technology, and time consuming effort by the Empire to have, for once, an assassin droid project not go wrong (as did the IG -series droids went downhill).

Known to Imperial Intelligence as "Project Dark Eclipse" and directed under the authority of Imperial Supervisor Gurdan, one LTV droids was built in the remote planet of Yader, an Imperial weapons testing outpost. LTV-108 was to be its name...

The droid stands two meters high and is of a humanoid body form. A yellow plastoid "mask" is over the droid's internal components in the face area. Other yellow plastoid covers the chest, back, and shoulders, with flimsier padding in the leg and arm areas, meant to not restrict dexterity.

Equipped with the powerful, comprehensive, unlearning 14407 micro-processing chip, a technological breakthrough that was found after the Clone Wars by mysterious circumstances. That one fingernail-sized micro-chip has enough power to run an entire Star Destroyer, monitor its systems, provide thrust in the engines, and fire weapons. Just think what that technology can do in the body of one droid, an independent being roaming the galaxy.

Another feature of LTV-108 is its Morph-O-Graph technology, a program allowing the droid to take a 3-D picture of a subject, process it, and graph its shape, size, and physical features to its body. If LTV-108 were to sustain any damage during a morphed figure, he would immediately return to his normal figure.

Unfortunately for Gurdan, LTV-108 managed to escape from Yader, escaped in a Skipray Blastboat, and was roaming the galaxy in search for its programming target, the wanted man known as Luke Skywalker.

After days and months of evasive and hunting action, LTV-108 was finally forced to use its internal nuclear destruction unit after Luke had nearly destroyed the droid unit atop a manufacturing tower on the droid producing world of Mechis III, where Luke had confronted him. Although Luke managed to escape, the nuclear blast concealed the work of LTV-108 on Mechis III, and destroyed the only 14407 micro-processing chip in the galaxy. Or is it?

Type: Cybernetic (droid) assassin

Dexterity 5D+2

Blaster 10D, repeating blasters 11D+1, particle weapons 8D+2, firearms 9D+1, brawling parry 9D, brawling parry: martial arts 11D+2, melee parry 5D, melee combat 7D, grenade 7D, missile weapons 6D+2 running 8D+2, energy weapons 9D

Knowledge 3D+1

Alien species 4D+1, intimidation 8D, languages 5D, law enforcement 6D willpower: intimidation 9D+1

Mechanical 4D

Communications 5D+1, sensors 7D, repulsor pack operation 10D, repulsorlift operation 5D+1

Perception 5D

Bargain 6D+1, con 12D, hide 8D, investigation 6D, investigation: search: tracking 11D+1, sneak 11D+2, sneak: urban 13D

Strength 12D+1

Brawling 8D, brawling: martial arts 14D+1*, climbing/jumping 9D, stamina 8D+2, swimming 9D

Technical 4D+2

Armor repair: LTV droid armor 9D, blaster repair 6D+2, computer/programming repair 5D, security 6D

Move: 12; 8 (swimming)

Equipped With:

a.. Yellow Plastoid Armor (+1D physical and energy, covers legs, arms, torso, and head); can automatically seal off in case of emergency, or can be sealed for use in or under water).

b.. Morph-o-graph Technology (allows the LTV to shape into any living thing it has contact with; when the LTV sustains any damage while in a morphed figure, it automatically switches back to his normal figure).

c.. Net Launcher (uses missile weapons skill, ammo: 20, 2-10/15/30, net keeps victim pinned down for 4D rounds, holding the victim in the molecularly-bonded in place while causing 6D stun damage).

d.. Wrist Blades (Strength+2D)

e.. Concussion Grenade Launcher (uses missile weapons skill, ammo: 10, 12-20/25/40, 5D/4D/3D/2D, blast radius of 0-2/4/6/10)

f.. Repulsorlift Pack (has a move of 7/20 km/h, 15 charges available, may be used once per a round).

g.. Multi-Channel Long-Wave Comm Array (uses communications skill, picks up and sends out frequencies as wanted within a 50 kilometer range.

h.. Infrared (IR), ultraviolet (UV), optical, telescopic, and targeting vision sensors (IR scan adds +2D to search or Perception for heat or warm-blooded mammals or objects, ultraviolet can adds +3D to search or Perception in finding light or light outlines, while the optical is normal "human vision", telescopic view adds +2D to search, blaster(or any other weapon), or Perception at long range, and targeting perspective, for one round of aiming, gives a +2D bonus to every weapon fire for one round).

i.. Self-destruct system (blast radius 0-10/25/50, does 10D/8D/6D capital scale damage. If LTV becomes in any way trapped, an automatic destruction circuit rewires all available energy to trigger the system. Time till explosion from re-circuitry is usually four minutes.

j.. VV-099 Auto-tech Droid Brain

k.. 14407 LSB Micro-processing Computer Chip

Equipment: Phaser emitting rifle (1D-7D), Berreta 9mm (3D+2),

M79 grenade launcher (6D/4D/2D, blast radius: 0-2/4/6)

Special Abilities:

*Teras Kasi Martial Arts: Allows LTV droid to perform three brawling or brawling: martial arts skills without Dexterity penalties. Also provides a +2D die bonus for skills such as dodge or brawling parry when dodging or parrying these attacks.
