

Vetricon VCH-5 Combat Helmet

Vetricon's first released model of standardized helmet. The VCH-5 is made out of a composite palstoid that covers the top of the head and has an adjustable chin strap. A visor plate slides down over the eyes. This visor has macrobinoculars and a PLE, passive light enhancement, module built in. A very small antenna sticks up from the side of the helmet, this antenna serves as a 360 degree motion sensor which feeds the data to a Heads-up-Display(HUD) in the top right corner of the visor. A breath-mask can also be pulled down over the exposed part of the face, the eyes and nose, to protect the wearer from harmful things in the air.

Model: Vetricon Enterprises VCH-5 Helmet

Type: Light (Combat Helmet)

Cost: 300
