Equipment D20 / Garman Industries Filtration

Filtration Breather

The filtration breather is a simple design concept to serve a simple and basic purpose: breathing underwater or in unhospitable atmospheres. The filtration breather is nothing more than a mouthpiece with a short tube reaching out approximately three centimeters from each side of the mouth.

Water or non-breathable atmosphere (assuming that oxygen is present) is pulled into the tubes as the user inhales where the oxygen is filtered out and passed on in a pure form. These filters are relatively cheap and commonly found across the galaxy.

Garman Industries Filtration Breather
Cost: 50 credits

Game Notes: Filter can successfully filter out oxygen from most liquids and other gases for up to two hours before filter material requires changing. Changing out filter material takes two rounds and the required materials cost anywhere from five to ten credits.
