

VerdantTech Energy Katana

Verdant Technologies looked at the traditional jedi lightsaber and saw a great market. People looked back on the 'good ole days' with some fondness. The esoteric nature of lightsabers could be capitalized on as VT saw it. They set about trying to reproduce something at least close to the lightsaber. What it created was the ER0 series of weapons. Rather than using a focusing crystal like lightsabers, the ER0's use a special crystalline matrix. This makes the edge of the blade much less smooth, and it 'trails' somewhat as it is swung. Energy is put through a sort of plasma infusion state. Using technology gleaned from Lumnar Industries, an ether battery was developed. This makes it so that the blades pull the energy from the world around it, not needing a recharge. As was said before, the energy is focused into a partial plasma state, and when it is swung some of the energy can start to 'trail' behind the blade as it is swung. The X07 forms a fairly long blade with a slight curve to it. This blade is good for combat from a few paces away.

Model: Verdant Technologies ER0-X07 Energy Katana

Type: Energy Sword

Scale: Character

Skill: Melee Combat: Energy Katana

Difficulty: Moderate

Damage: STR+3D+1 (Max: 7D)

Page designed in Notepad, Logo's done in Personal Paint on the Commodore Amiga
