Corellian Engineering Corporation YT-2000 Transport

The C.E.C. YT-2000 is a light transport like the YT-1300 and YT-2400 transports. It was equipped with an Ion Cannon and a Dual Dorsal Laser Turret. With the Ion Cannon it could be used in capturing enemy vessels. It was a rare sight to see these transports because they were limited edition vessels. Also they used a center cockpit instead of the cockpit being on the right side of the ship. One of the most known YT-2000 is the Otana (See Otana).
