Starships D20 / Naboo Royal N-2 Bomber

Naboo Royal N-2 Bomber

While not boasting a formidable military force, the people of Naboo were equipped to defend themselves on a small level. Their royal starfighter corps made up the bulk of the planet's defense force.

While the N-1 starfighter would stand out as the keystone of Naboo's defense force, it was not alone. The N-2 fighter/bomber, while not nearly as commonplace as the N-1, did fill a vital role.

The N-2 was designed with a highly advanced quad proton torpedo pod mounted on a remote turret controlled by the gunner. This allowed the N-2 to launch devastating vollies of proton torpedoes in multiple directions. To incorporate this feature, Theed designers were forced to eliminate all hyperdrive systems, thus negating the need for an onboard astromech droid.

Slower and less maneuverable than the N-1 starfighter, the N-2 was equipped with slightly heavier armor and was intended to be used in flights of four or more.
