Starships D20 / Altarren AF76 Assault Fighter

Altarren AF76 Assault Fighter

The Altarren's AF76 tactical assault starfighter was designed specifically for engagement against other spacecraft and for planetary strikes. Equipped with four fire-linked laser pulse cannons, the AF76 fighters were short-range craft relying upon the Ares starcruisers and other carrier craft for long-range transport.

The AF76 had two massive triangular wings positioned parallel above and below the main fuselage, each with a laser pulse cannon mounted on the tip. The cockpit was oriented toward the nose of the craft in such a way as to provide the pilot with a superb field of vision.

During the initial phases of the Imperial takeover of Altarr, the centuries old AF76 fighters fought on par against the Empire's famed TIE starfighters. However, the Imperial cruisers proved much to powerful for the Altarrens to defeat and Altarr thus fell.
