

Starships D6 / Republic Siemar Homebase

Homebase-class Scout Station

Craft: Republic Siemar Homebase-class Scout Station

Type: semi-mobile scout supply station

Scale: capital

Length: 165m

Crew: 106, gunners:10

Passengers: 234

Cargo capacity: 25,000 tons

Consumables: 6 years

Hyperdrive: X10

Backup X30

Nav Comp: yes (extremely advanced and fast)

Manueverability: 0D

Space: 1

Hull: 3D

Shields: 1D

Sensors: 150/1D; 300/2D; 600/3D; 20/5D+2

Weapons:

2 Turbolaser Turrets

fa: turret

Crew:2

fc: 3D

space range: 3-15/35/75

damage: 3D

2 Tractor Beam Projectors

fa: turret

crew: 3

fc: 1D

space range: 1-5/15/30

damage: 3D

capsule: The Homebase scout station was introduced some decades before the Clone Wars, but is based on a design dating back to the height of Old Republic expansion and exploration. The idea was to give scouts an advance resupply base to extend their range farther beyond known space. To this end the Homebase was equipped with a hyperdrive to allow it to continue to move forward as the frontier moved. The nav computers of the Homebase were marvels in their day, being able to calculate jumps extremely quickly and accurately. Even today the massive computers are above average, adding +4 to the

astrogation rolls of anyone using them to calculate a jump. This meant that scouts departing from the homebase station wouldn't have to calculate their own jumps, but could instead rely on the safer calculations made by the Homebase. The Homebase was equipped with an advanced sensor suite. The idea behind this was that if an incoming scout had made a slight miscalculation, and required assistance, the Homebase would have a reasonable chance of being able to detect this fact, and could send out a shuttle of some sort to aid the stricken scout. In its intended use this sensor suite was the most underused of the Homebase's features. The Homebase featured only one small interior hangar bay, intended for use in repairing badly damaged scout ships, but had small exterior docking pylons which could allow up to 10 small vessels to dock (anything roughly 50m long and smaller), as well as one larger docking pylon intended for use by the occasional corvette or bulk freighter which would resupply the station itself.

The Homebase design always had a limited production run, but was in fairly high demand. Although the primary customer for the Homebase was the Old Republic Scout Service, some were purchased by independant scout services, and even by organisations which had nothing to do with scouting. With the culling of the scout service after the Empire arose the Homebase was put out of production. Most of the Homebases formerly used by the scout service were pressed into Imperial Naval service. In this function they would be placed mostly in out of the way systems, where they could service light patrol ships, and where their powerful sensor suites could be used to detect any incoming traffic before the patrol ships would notice it. The Homebases have served quite well in this function, and were briefly quite in vogue, as every Moff wanted a few Homebases to increase the effectiveness of his customs and patrol forces. In Conheav sector, the Lechar, Pecsus, Conheav, and Kalpol systems are all protected by Homebase stations. It should be noted that this is an unusually high concentration of Homebases to be found in a single sector. It is suspected that at least one pirate group has made use of a Homebase station in the past to resupply its vessels, and serve as a command and recreation facility, capitalizing on the fact that the space station can jump from system to system when necessary.
