DESCRIPTION:
Submarine aircraft carrier in service with the Anti-U.N. Forces and refitted from a super-scale missile nuclear submarine of the former Russian forces. It is an elusive, difficult foe. SV-51 units deployed and launched from carrier in 2008. The carrier launches SV-51s in pressure-resistant capsules from underwater and rises to the surface only for their retrieval. [Note: Several SV-51 units exists which have been modified for underwater launching capabilities from submarines.].
