Description:The GVB Osiris is a Vasudan-designed bomber, brought into service prior to or during the Terran-Vasudan War. While it served as the Parliamentary Vasudan Navy (PVN)'s main bomber during the Great War, the aftermath of that conflict, as well as developments in the Vasudan fleet from 2335 to 2367, meant that, although still commissioned, the Osiris is classified as a reserve bomber by the time of the Second Shivan Incursion.

Among the three bombers in the Vasudan fleet (the other two being the GVB Bakha and GVB Sekhmet) during the time of the Second Shivan Incursion, the Osiris is the slowest, the least agile, carries the lightest payload, and has the worst shield system of the three. However, the Osiris is also the most durable, and is the only bomber among the three to sport two automated turrets—or any turrets, for that matter.
