DESCRIPTION:

Chiss Beacon Ships were used by the Chiss in a support role and were charged with providing hyperspace coordinates to Nssis-class Clawcraft as well as other ships within the Chiss fleet that lacked navigational computers. Depending on the length of a journey, these ships were often strung along travel routes where they coordinated smaller ships as well as ensured that they were not lost in their travels.

Its complement of 36 fighters usually consisted of a mix of Advanced Clawcraft, Nssis-class Clawcraft, Chiss Heavy Fighters and Chiss Recon Fighters.

GAME NOTES

NAVIGATION BEACON: Several ships used by the Chiss Ascendancy and the Empire of the Hand relied on navigation beacons for hyperspace coordinates, which would either be supplied by already established hyperspace beacons, or by beacon ships such as this one. In the Sensors section, there is an addition for the navigation beacon. While fighters and other ships go into battle, the beacon ship can stay far away, safe and sound, and if the fleet needs new hyperspace coordinates for a jump, the beacon ship relays these coordinates to all ships being supported in its fleet.
