Description: The Droch-class boarding ship, also known as the pod hunter and the Separatist boarding craft and nicknamed "juicers" by the Galactic Republic's clone troopers, was a model of boarding craft used by the Confederacy of Independent Systems and built by the Colicoid Creation Nest.
The Colicoid makers of the Droch-class based its design on the toothspike raptor of Colla IV.
The Droch-class was armed with a large set of four spikes arranged around the cockpit, that were used to crush an object trapped inside the array, which led the Galactic Republic's clone troopers to name the ships "juicers." These four spikes also could be used to pierce the hull of a ship and deploy a boarding party. It usually carried a few rocket battle droids. The pilot sat on top of the

vehicle, and it could be used as a local transport for several troops, which entered and exited from a central passenger compartment.The boarding craft was lightly armed, with a number of light laser cannons.
The versatile troop transport could be used to capture enemy starships relatively intact, to be later used in covert missions
