Droids D6 / Cybot Galactica CLL-series load l

Type: Cybot Galactica CLL-series load lifter
Dexterity: 1D
Knowledge: 1D
Mechanical: 1D
Perception: 1D
Strength: 7D
    Lifting 10D
Technical: 1D

Equipped with:
- Humanoid Body (two arms, two legs)
- One visual and one auditory sensor - human range
- Binary vocabulator
- Manipulator arms
- Repulsorlift generator
- Armour Plating

Move: 8
Size: 3 meters tall
Cost: 15,000

Description: The CLL-M2 ordnance lifter was Cybot Galactica's military version of their CLL-6 binary load lifter droid.

The droid stood on powerful durasteel legs, which in turn were anchored by two magnapod disks. It had extremely thick armor to protect it from attacks and accidental detonations of ammunition. Its arms were made to handle cargo skids and missiles, while the primitive cognitive module stood at the center of the droid, covered by a single, large photoreceptor. A repulsorlift drive on the droid's back allowed it to compensate for lifting cargo heavier than itself. The droid was set to obey verbal commands by its operators, but only spoke Binary itself. It was not particularly bright, but it was programmed to handle ammunition, reload weapons and perform basic repairs. It cost 15,000 credits new.
