Starships D6 / Sacul Industries Star Commute

Name: Sacul Industries Star Commuter 2000 Shuttle
Scale: Starfighter
Length: 17.5m
Skill: Space Transports - Star Commuter
Crew: 1
Passengers: 24
Crew Skill: RX-Series pilot droid
Consumables: 5 Days
Cargo Capacity: 10 Tonnes
Hyperdrive Multiplier: X4
Hyperdrive Backup: No
Nav Computer: Yes
Space: 5
Atmosphere: 295;850kmh
Maneuverability: 1D
Hull: 3D
Shields: 1D
Sensors:
- Passive: 15/0D
- Scan: 30/1D
- Search: 50/2D
- Focus: 2/2D+2

Description: The Star Commuter 2000 was a model of unarmed hyperdrive-equipped shuttle manufactured by Sacul Industries. The shuttles, small ferry craft which were piloted by RX-Series droids, were used to transport travelers on short trips between nearby planets. Passengers used a hatch/boarding ramp on the port side, close to the front. They featured two rows of double seating and a seatbelt for each seat. Directly behind the seats was the rear area of the craft, where the passengers' droids were to stand according to Imperial regulations. By 3272 LY, Lothal was linked to Garel by ST-45, which was piloted by the droid named RX-24. That year, the rebel crew of the starship Ghost booked passage for Garel aboard shuttle ST-45 as part of a scheme to gain information from Maketh Tua, an on-board Imperial minister.
