Starships D6 / Twilight

Name: Twilight
Type: Corellian Engineering Corporation G9 Rigger-class light freighter
Scale: Starfighter
Length: 34.1 meters
Width: 16.97 meters
Height/depth: 15.73 meters (outrigger extended)
Skill: Space Transports - G9 Rigger
Crew: 2
Crew Skill: varies
Passengers: 6
Consumables: 1 Month
Cost: Not available for sale
Cargo Capacity: 70 Tonnes (in hangar bay, so can be used to store a starfighter)
Hyperdrive Multiplier: X1
Hyperdrive Backup: X14
Nav Computer: Yes
Space: 6
Atmosphere: 450;900kmh
Maneuverability: 3D
Hull: 4D
Shields: 3D
Sensors:
- Passive: 20/1D
- Scan: 40/2D
- Search: 60/3D
- Focus: 2/4D

Equipped With:
- Sickbay (1 person), with Doctor Droid Holographic Medical Advisor
- Anakin Skywalker's Delta-7B Aethersprite-class light interceptor
- Harpoon and tow cable and magnetic field over docking bay

Weapons:
- Heavy blasters (3)(Pilot)
  - Fire Arc: Front
  - Skill: Starship Gunnery
  - Fire Control: 1D
  - Space Range: 1-3/12/25
  - Atmosphere Range: 100-300/1.2/2.5km
  - Damage: 4D
- Rotating laser cannon with periscope control (1) (co-pilot)
  - Fire Arc: Turret
  - Skill: Starship Gunnery
  - Fire Control: 2D

Space Range: 1-3/12/25
Atmosphere Range: 100-300/1.2/2.5km
Damage: 5D

Concussion Missile Launcher (1) (7 missile magazine)
Fire Arc: Front
Skill: Starship Gunnery
Fire Control: 2D+1
Space Range: 1/3/7
Atmosphere Range: 50-100/300/700m
Damage: 7D

Description: The Twilight was a G9 Rigger freighter that was originally used by Hutt crime lord Ziro Desilijic Tiure as a spice freighter during the Clone Wars. Later in the Battle of Teth, Jedi Knight Anakin Skywalker and his Padawan, Ahsoka Tano, used it to take Hutt crime lord Jabba Desilijic Tiure's son back to his home planet of Tatooine, but were shot down over the planet and were forced to crash-land the ship. After they abandoned it, the ship was scavenged by Jawas, and Skywalker later returned and reclaimed it.

After it had been reclaimed, the Twilight was later used by Skywalker in several missions during the coming events in the war. These included Skywalker and Obi-Wan Kenobi's rescue of Galactic Senator Padmé Amidala aboard the Confederacy warship Malevolence during the Battle of the Kaliida Nebula, as well as Skywalker and Tano's mission to destroy a Confederacy listening post. Additionally, Skywalker and Kenobi took the freighter to Florrum to confirm that Sith Lord and Confederacy Head of State Count Dooku had been captured by pirates, in order for a deal to be struck between the pirates and the Galactic Republic, and the two Jedi later used the Twilight to find an antidote for the deadly Blue Shadow Virus on the planet Iego. Later on, the Twilight would be used once again by Skywalker and Tano during their mission to Mustafar. In 20 BBY, it was discovered that Darth Maul had taken over the planet Mandalore with the help of Pre Vizsla and the Death Watch. Kenobi used the freighter as a way of sneaking in to rescue Duchess Satine Kryze, who had been imprisoned by Maul. The two attempted to escape in the Twilight but it was hit by a missile and crashed, forcing them out of the ship.

The Twilight had one big main wing and one retractable second wing, which was placed under the main wing and was approximately half the size of the main wing. The retractable wing was called a Tal Nami Freighter Swing Wing, which gave the craft extra maneuverability. It was also equipped with one heavy blaster cannon. Another smaller retractable wing was placed above the main wing equipped with a double heavy blaster cannon. If needed the wing would go in the upright position to allow the blasters to be fired. The cockpit was positioned between the main wing and the main engine. Astromech droid R2-D2 traveled inside this cockpit with the ship's captain, Jedi Knight Anakin Skywalker. Just next to the cockpit, the main wing housed two small, secondary engines. Despite similarities to the later Imperial Lambda-class T-4a shuttle, it was of Corellian manufacture.

The ship was armed with three heavy blasters, located on struts around the ship, concussion missiles and also had a rotating laser cannon mounted on the main wing, with periscope controls. The Twilight had a small hangar in its rear, big enough to fit Skywalker's starfighter. The hangar was otherwise used as a cargo hold and was equipped with a magnetic field to allow outer space transfer of goods. A tow cable was placed to winch in heavy containers. The ship also had a boarding ramp underneath the vessel, which acted as the main entrance to the ship. The hangar door could also be used as an exit and entrance to the ship.
