Starships D6 / Arakyd Industries X3-13 tactica

Name: Arakyd Industries X3-13 tactical infiltration pod
Scale: Starfighter
Length: 11.7 meters
Skill: Starfighter Piloting - Hyperdrive pod
Crew: 1
Consumables: 1 Day
Cargo Capacity: 100 Kg
Hyperdrive Multiplier: x0.5
Hyperdrive Backup: No
Nav Computer: NA
Space: 6
Atmosphere: 315; 750kmh
Maneuverability: 2D
Hull: 2D
Shields: No
Sensors:
- Passive: 20/0D
- Scan: 40/1D
- Search: 60/2D
- Focus: 2/3D

Communication systems:
- Long-range transmitter

Weapons:

Description: The X3-13, also known as the tactical infiltration pod, was a model of short-distance hyperdrive pod manufactured by Arakyd Industries and used by the Galactic Empire for short-distance transportation and reconnaissance. Due to its role, it sacrificed maneuverability and weaponry for advanced communications equipment, including a long-range transmitter and encryption abilities. The pods were designed to look like normal escape pods in order to aid in infiltration. One such pod was used by the E-XD infiltrator droid EXD-9 to travel to Atollon to search for the Phoenix Cell's base.

The X3-13, or tactical infiltration pod, was a class of hyperdrive pod manufactured by Arakyd Industries and utilized by the Galactic Empire. It could achieve speeds of 750 kilometers per hour, was 11.7 meters in length, and was equipped with a Class 0.5 hyperdrive.

The X3-13 forfeited maneuverability and weaponry for advanced communications equipment, including a long-range transmitter at the bow of the pod and encryption abilities. It was equipped with four landing thrusters to allow for a quiet approach.
