Equipment D6 / Tagge Company Weapons de

Model: Tagge Company Weapons detection system
Type: Computerized Sensor System
Scale: Character
Cost: 300,000
Availability: 2
Game Notes: Gives sensor operators +3D bonus to tracking armed targets. This is a large system, but could be installed on a Capital Ship, or in an installation.

The Tagge weapons detection system was a system that could detect and track every single weapon over a very large area. On Metalorn this system was used in tandem with pulse beat sensors to determine whenever an unauthorized being took hold of a weapon. The system could then track that weapon without error. During the Mission to Metalorn Leia Organa took advantage of this system by abandoning her tracked blaster rifle, misleading her pursuers. While this was embarrassing to Baron Orman Tagge, the system did technically work perfectly.
