Creatures D6 / Saber cat

Name: Saber cat
Type: Non Sentient Predator
Homeworld: Monastery
Habitat: Forests

Dexterity: 4D
Perception: 3D
Sneak: 4D
Strength: 3D+2

Special Abilities

Fangs, Claws and Horn: Saber cats have a selection of razor sharp weapons available to them, from their goring horn to their claws and fangs. Each of these allow the cat to do Str+1D damage in combat.

Tamable: Although lethal predators, when fed these animals can be fairly easily trained and will not hunt and attack unless they become hungry or feel in danger.

Move: 18
Size: 2.3 meters
Orneriness: 2D

Description: The saber cat, or sabercat, was a huge, feline, carnivorous species native to the planet Monastery. They were predators with a thick horn which protruded from the top of the skull. The saber cat had four huge paws, each with five razor-sharp claws. Their teeth were also razor-sharp.

In their years on Monastery, the members of the Order of the Sacred Circle had tamed several saber cats, and kept them as pets.

The whelps brought a high price on the black market, and they were often pets and status symbols for crimelords and nobles.

When Luke Skywalker accompanied Domina Tagge back to Monastery on a diplomatic mission, he saved her from a seeming-saber cat. In truth, Domina Tagge manipulated the creature, (as she had done earlier with a nightshrike).
