

Weapons D6 / Verdant Technologies H

VerdanTech HP-90 Plasma Howitzer

The HP-90 is a unique weapon. It fires a special kind of plasma shell. It has a smooth oval casing, around an energy conduction layer which sits around a container of a special kind of incendiary fuel floating around a stabilized, small, nuclear device. This nuclear device is the size of a shockball ball. The nuclear charge is just to set off the reaction needed to cause the blast desired. When the shell is fired from the cannon it is charged internally and externally. The outer shell is also very conductive and the energy from the cannon charges, it while an internal battery activates charging the inner track and a small motor begins to spin the liquid fuel. The shell itself isn't visible once fired, it instead appears as a glowing ball of scarlet light that spikes out in every direction, like a star. It will land with great force to penetrate through any bunker, sit there for approximately 3 seconds, and then detonate. There have been documented survivor reports who claim it looked like a "bloody star fallen to the earth to release scarlet fury." The energy spikes stick out from a smooth energy layer around the shell. They get even longer right before they explode and the hue lightens. The blast that's touched off is incredibly powerful and even in the outermost layers of the blast most buildings can't withstand the force of the explosion.

Model: Verdant Technologies' HP-90 Heavy Plasma Howitzer

Type: Heavy plasma howitzer

Scale: Walker

Crew: 4

Skill: Blaster Artillery

Body: 3D

Cost: 59,000, 2,000 (box of 10 shells)

Range: 900/2.5/5 km

Blast Radius: 25/60/150 meters

Damage: 6D (penetration) 12D/9D/5D
