Description: The Raider II-class corvette was a model of the Raider-class corvette. The Corvus, which belonged to Inferno Squad, was one such ship.

The Corvus had a hangar bay that was seen storing a maximum of two TIE/ln space superiority starfighters and two X-wing starfighters. It also had a sizeable command bridge. The corvette had three landing gear legs and one boarding ramp. The boarding ramp was accessed from the hangar bay and was part of the hangar floor when it was retracted. This means that there couldn't be a ship landed on the part of the floor that is the boarding ramp for it to be used. It is unknown if this was a standard loadout or a modified version for special forces.
