Starships D6 / Particle disintegrator Warhead

Name: Particle disintegrator Warhead
Type: Galaxy Gun Missile
Scale: Starfighter
Length: 13.4 Meters
Skill: Starfighter Piloting - Particle disintegrator Warhead
Crew: 0
Automated Skill: Starfighter Piloting 4D+2, Starship Gunnery 5D, Starship Shields 2D
Hyperdrive Multiplier: X0.75
Hyperdrive Backup: N/A
Nav Computer: Limited to 1 Jump
Space: 7
Atmosphere: 400;1,000kmh
Maneuverability: 3D
Hull: 7D
Shields: 6D
Sensors:
- Passive: 20/0D
- Scan: 40/1D
- Search: 60/2D
- Focus: 2/3D

Weapons:
- Twin Heavy Laser Cannons
  - Fire Arc: Impact
  - Fire Control: 0D
  - Scale: Death Star
  - Space: 0
  - Atmosphere Range: 0m
  - Damage: 6D
- Twin Laser Cannon Turrets (2)
  - Fire Arc: Turret
  - Fire Control: 3D
  - Space: 1-3/12/25
  - Atmosphere Range: 100-300/1.2/2.5km
  - Damage: 5D

Description: A particle disintegrator warhead was a weapon utilized by the Galactic Empire. It was carried by projectiles fired from the Galaxy Gun.

A particle disintegrator warhead depended on an external powerplant to ignite a nuclear chain reaction, which was perpetuated into previously inert materials, causing complete destruction on a molecular level. The only check on the extent of the chain reaction was the magnitude of the power supply. A typical warhead had the capacity to destroy an entire planet, although the chain reaction could be moderated to affect just a select continent or city. The warhead also required optimal

timers to detonate, and any faulty components to the timers will carry the risk of the warhead becoming a dud. This was especially evident during the Destruction of the Nespis VIII spaceport, where the first warhead fired at the Space City of Nespis VIII failed to detonate upon impact just as the New Republic High Command was about to evacuate, due to the timers being made of faulty components made from Bonadan. The warheads when launched are also outfitted with extensive shielding in order to ensure that the missile cannot be shot down before reaching the target.
