Vehicles D6 / Kamino Engineering KE-8 Enfo

Type: Kamino Engineering KE-8 Enforcer ship
Scale: Starfighter
Length: 4 meters
Height: 13 meters
Cost: 80,000 credits
Skill: Repulsorlift Operation, KE-8 Enforcer
Crew: 1
Cargo: 2 Tonnes
Cover: Full
Maneuverability: 1D
Move: 30, 10 kmh
Altitude Range: Ground-200 Meters
Body Strength: 3D
Equipped With:
Manipulator arms

Weapons:
Electroshock stun device
Fire Arc: Front
Fire Control: 1D
Space: 1/2/3
Atmosphere Range: 50-100/200/300m
Damage: 5D (stun)

Description: The KE-8 Enforcer was a repulsorlift patrol craft used by the Kaminoan cloners to monitor the cloning facilities on Kamino.

Characteristics
The KE-8 was a single-being craft, measuring thirteen meters in height and four meters across. While capable of space flight and technically designated as a starfighter, the KE-8 was commonly relegated to planetary operations, and was fitted with no offensive weapons.

History
To keep clones in line and detect aberrants, the KE-8 was armed with a sophisticated sensor suite and an electroshock stun device. It also had a pair of manipulator arms that could be used to move materials many times the vessel's weight, although those generally required a co-pilot to operate. The KE-8 had fine repulsor control, and could hover in place for extended periods of time.

KE-8 Enforcers were used for isolating clones straying from the process and for finding new and better ways to deal with them. Pilots were commonly specialists in the detection of genetic mutations and aberrant development. KE-8s were also used at the opposite end of the spectrum, and would use their sensors to pick out promising warriors from clone trooper ranks. These individuals would then be recommended for advanced training, set to become cross-trained clone trooper commanders, clone commandos, or Advanced Recon Commandos.
