

Starships D6 / Warlock Heavy Star Destroyer

Warlock Heavy Star Destroyer

The Warlock-Class Star Destroyer was designed to capture what was to be one of the most lucrative naval contracts in galactic history. The Emperor had issued a mandate that a warship capable of subjugating an entire world and defeating entire fleets of lesser ships was to be built. Rendili answered this call with the Warlock. Nearly 2,000 meters long, the Warlock mounts some of the heaviest weapons ever built into a starship. Her main guns are two immense continuous-beam turbolaser capable of punching completely through most ships with a single shot. Backing these long-range artillery pieces up are 9 double turbolaser turrets meant for medium-range engagements as well as 3 heavy railguns for extreme-range sniping. To deal with mid-sized enemy capital ships, the vessel mounts 4 medium turbolaser turrets and carries 9 light turbolasers for use against the smallest capital ships such as large assault shuttles, blastboats, and gunships. 16 heavy anti-starfighter batteries guard against heavy space bombers such as the Y-Wing while 36 smaller quad laser cannons serve as defense against lighter snubfighters. Rounding out the armament are 12 heavy concussion missile launchers armed with ship-killing guided missiles and 16 light concussion missile launchers for use against enemy fighters. Finally, these ships are equipped to carry 72 fighters, 12 bombers, and 12 assault shuttles. While a valiant effort by Rendili StarDrive, this ship was doomed to failure due to the utilitarian nature of her design. Not nearly as visually intimidating as an Emperor-Class Star Destroyer, the Warlock's design is all business with no attention given to aesthetics or psychological impact. Additionally, the Warlock was not designed to carry large numbers of troops and ground assault vehicles like the smaller Emperor could do and was thus passed over in favor of KDY's design. Twelve Warlocks were built, but no one has ever discovered exactly what became of them. Conflicting reports have stated that the ships were scrapped, stolen, sold to an Outer Rim government, and even that they disappeared in a hyperspace accident. Their true fate has so far remained a complete mystery and is likely to remain so for quite some time.
