Equipment D6 / MB450 Macrobinoculars

Name: MB450 Macrobinoculars
Type: Standard Macrobinoculars
Skill: Sensors
Cost: 100
Availability: 1
Range: 100-250/500/1,000 (100 meters to 1 kilometer)
Game Notes: All search and Perception-oriented skills are increased by 3D when using the macrobinocular to view areas more than 100 meters away. If attached to a blaster via specialized programming software, they provide a +3D bonus to all medium and long-range shots, provided the attacker is in a steady “sniper” position.

Description: MB450 macrobinoculars were a type of macrobinoculars that allowed users to see objects at a distance clearly. They included an aid which relayed the distance and altitude of objects, and could also be used when it was dark. Some versions of the macrobinoculars possessed a recording function which allowed for the saving of pictures. Luke Skywalker owned a set of MB450s that he used to observe a group of Tusken Raiders following his hunt for R2-D2.
