Description: The Phial Class Heavy Transport is based on the designs of the Rendili StarDrive Dreadnaught but has most weapons and some armor removed to make space for additional cargo. These vessels are still hardy, and the spacious cargo holds are often converted for other purposes, such as the Endless Mercy which was converted into a science vessel. While these vessels were only produced for a short period of time, they remained in service long after their construction due to the abundance of spare parts from decommisioned Dreadnaughts.
